

AROMATIC SPIRAL

This aromatic spiral, inspired by permaculture practices, was built using traditional drystone techniques.

The sandstone, limestone, terra cotta and natural materials used are all recycled. This spiral is a site of interest within the Cross-Channel Geopark. The use of materials sourced from the local geology, combined with traditional craftsmanship, bears witness to the bond between humankind and the land.

The *Parc naturel régional* supports the passing on of traditional techniques.
